

# Сложный фильтр

```
const leads = await Global.ns._clients.app._leads.search()
  .where((f, g) => {
    let operands: Filter[] = [];
    operands.push(f.__deletedAt.eq(null));
    operands.push(f.__createdAt.gte(Context.data.start_date!));
    operands.push(f.__createdAt.lte(Context.data.end_date!));
    if (Context.data.status?.length) {
      let filterStatus: Filter[] = [];
      for (const adress of Context.data.adresses) {
        filterStatus.push(f._address.eq(adress))
      }
      operands.push(g.or(...filterStatus))
    }
    if (Context.data.companyes?.length) {
      let filterChannel: Filter[] = [];
      for (const company of Context.data.companies) {
        filterChannel.push(f._companies.link(company))
      }
      operands.push(g.or(...filterChannel))
    }
    return g.and(...operands)
  })
  .size(10000)
  .all()
```
